

Managed backup, recovery and cybersecurity services

We secure your business and your data

Operational downtime and data loss can have devastating consequences. From cyberattacks and unpatched software to natural disasters, the underlying causes of downtime and data loss are numerous and the list grows daily as businesses become more reliant on digital connectivity. Securing your business requires comprehensive protection. Our essential cybersecurity services provide proactive endpoint management and make use of advanced technologies to quickly back up, restore and recover affected systems and data.

Complete backup and recovery

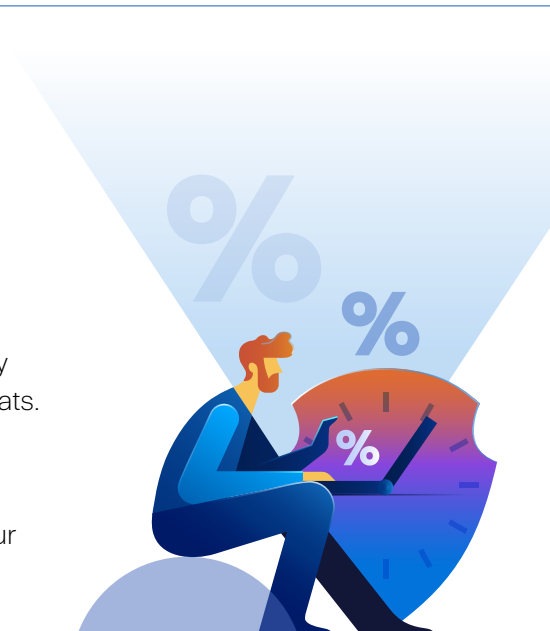

Full-image and file-level backup and recovery technology safeguards workloads on more than 20 technology platforms and can restore data to bare metal (physical), virtual or cloud environments.

Advanced cybersecurity

AI-based behavioral detection blocks malware, ransomware and zero-day attacks while vulnerability assessments continuously monitor for potential threats.

Proactive endpoint management

Fully managed cybersecurity services that provide peace of mind that your business, your data and your systems are secured.

Fully managed backup, recovery and cybersecurity services

Cybersecurity expertise and services you can count on

- Improves cybersecurity and eliminates the need for internal security expertise
- Proactively protects and maintains critical software and systems
- Continuously monitors your IT environment with advanced technologies and security experts.
- Increases response time to technical issues with personalized support from a trusted advisor
- Reduces costs by outsourcing IT and conserving in-house resources
- Scales with your organization and evolves with your IT and business requirements

Fully managed backup, recovery and cybersecurity services

Protect critical endpoints and systems with a comprehensive cybersecurity service that secures your business and your data.

Cybersecurity

Defend your business with anti-malware and anti-ransomware technology that blocks zero-day threats and prevents data leaks.

Management

Receive remote assistance and continuous monitoring of your critical endpoints, systems and data, along with up-to-the-minute reporting.

Disaster recovery (DR)

Achieve business resilience in the event of a cybersecurity incident, natural disaster or IT disruption.

Backup and recovery

Minimize data loss across your infrastructure and workloads with advanced backup and recovery to both local and cloud storage. AES-256 encryption is included for stored and in-transit data.

Vulnerability assessments

Identify and close security gaps. We scan your machines for vulnerabilities to ensure that all applications and systems are up to date and can't be exploited.

File sync and share

Increase productivity by creating and securely sharing corporate content from anywhere, at any time, and on any device.
